

## Desalin Gel Rust Remover® Gel for removing rust from metal surfaces

**Desalin Gel Rust Remover®** - Professional nanotechnology solution for cleaning and restoring cement, stone, masonry and plaster surfaces. It is recommended to use before applying the SurfaPore®C treatment. Fast and effective action for removing mold, algae and mineral deposits. Can be used in sanitary safety rooms (water rinsing required).

**Rust removal is often difficult: exposed steel bars under a horizontal beam, vertical steel surfaces or even old screws are rarely accessible with a dripping and dripping rust removal process . DeSalin Gel Rust Remover can be left without dripping even on a concrete slab overhead and removes rust effectively. In addition to its action as a rust remover, its active ingredients help to transform rust into a phosphating coating that creates a layer that is resistant to early corrosion . Therefore, in addition to being a remover, it also prevents the early development of rust. DeSalin Gel Rust Remover is also ideal for preparing rust surfaces for the application of paints. Removes rust stains on concrete, tiles or porcelain.**

### Benefits:

- Effective formula to clean cement, stone, masonry and plaster surfaces.
- Removes mold and algae.
- Removes mineral deposits.
- Fast and efficient action.
- **Applicable in sanitary safety rooms (water rinsing required).**

**Application:** Before applying the surface must be clean, free of dust and other residues. **Apply Rust Remover Gel Desalin** , using a brush. **Leave the product undiluted for 10-20 minutes.
